

Swastik College Website Development Competition

Final Demo Presentation Guidelines & Evaluation Brief

1. Project Overview

Shortlisted teams are invited to present their final solution for the next-generation public website for **Swastik College**. The goal is to evaluate your working prototype, technical architecture, user experience (UX) design, and practical plan for final production completion.

2. Technical Scope & Constraints

Core Requirements (In-Scope)

- **Public Interface:** A modern, responsive, fast, and accessible frontend delivering a professional UI/UX across desktop, tablet, and mobile devices.
- **Content Management:** A secure **Admin Dashboard** for managing dynamic content (News, Events, Faculty Profiles, Downloads).
- **CMS Flexibility:** Teams may use **headless CMS solutions** (e.g., Strapi, Sanity, Supabase) or structured mockups/APIs to demonstrate dynamic content handling, ensuring primary focus remains on public UI/UX execution.

Exclusions (Out-of-Scope)

- **No Internal Portals:** Do **NOT** present or build internal institutional systems such as MIS, ERP, SIS, LMS, Examination/Results, Attendance, Student/Teacher Portals, HR, or Finance Management.
- **No Student/Faculty Logins:** Authentication for general campus users is strictly outside the scope of this public website project.

3. Creative Innovation

Teams are encouraged to showcase innovative features that elevate the public user experience, such as:

- **AI-Powered Website Search**
- **Personalized Program Finder**
- **Campus Virtual Tour / Interactive Map**
- **Smart Event Calendar**
- **Multilingual Support**
- **FAQ / Admissions Chatbot**
- **Research Showcase & Alumni Stories**
- **Dynamic College Statistics Dashboard**

Scope Clarification: Public-facing innovations will **NOT** be penalized as scope creep, provided they do not attempt to replicate excluded internal administrative systems (MIS/ERP/Finance).

4. Final Deliverables

For this final evaluation round, shortlisted teams must present:

1. **Working Prototype:** A functional frontend codebase or high-fidelity interactive prototype showcasing key user journeys. We are not expecting full feature development at this point; however, team collaboration is encouraged and will be evaluated.
2. **Final Demo Presentation:** A live team pitch following the required outline, with active participation from all team members.
3. **Implementation & Completion Plan:** A clear roadmap detailing how the website will reach 100% production readiness by the targeted completion deadline.

5. Timeline & Targeted Completion Deadlines

Milestone / Deliverable	Target Date	Description
Final Codebase & Asset Handover	<i>[Insert Date]</i>	Clean repository, environment setup guides, and documentation submission.
Targeted Production Launch	<i>[Insert Date]</i>	Official deployment readiness for Swastik College public domain.

6. Final Presentation Structure

Every team must strictly follow this structure during their **10-Minute Slot (7 min pitch/demo + 3 min Q&A)**:

1. **Team Introduction & Project Vision**
2. **Problem Understanding & Target User Analysis**
3. **Website Scope & Sitemap**
4. **Live Prototype Walkthrough** (*Focus on core user journeys and key features*)
5. **Technical Architecture & CMS Strategy**
6. **Innovative Features Showcase**
7. **Production Completion Roadmap & Deadline Targets**
8. **Q&A Session with Judges (3 Mins)**

7. Evaluation Framework

Judges will evaluate teams across six core criteria totaling **100 Points**:

Evaluation Criteria	Weighting	Key Focus Areas
Information Architecture & UI/UX Design	25%	Visual hierarchy, mobile responsiveness, accessibility, navigation, design polish.
Requirements & Scope Compliance	20%	Strict alignment with public website goals; absence of unnecessary internal systems.
Technical Architecture & Feasibility	10%	Tech stack choice, code modularity, CMS integration efficiency, performance, scalability.
Prototype Execution & Functionality	15%	Working features, code stability, smooth performance during live demonstration.
Presentation, Q&A, Team Collaboration & Completion Plan	20%	Clarity, adherence to time, defense during Q&A, realistic roadmap to final deadline.
Innovation & Value Add	10%	Utility and implementation quality of smart features (AI search, maps, chatbots, etc.).
TOTAL	100%	

8. Rules, Constraints & Ethics

- **Focus on Live Proof:** Prioritize live functional flows over static slides during the presentation.
- **Technical Justification:** Be prepared to defend architectural decisions (frameworks, state management, hosting strategy).
- **Third-Party & AI Services:** If external APIs or AI models are integrated, teams must explain latency management, fallback logic, and cost sustainability.
- **Production Readiness:** The winning design should be practically deployable and maintainable for Swastik College within the specified timeline.
